

Apex :-

Apex Computers International Ltd - an impressive company.

John Elsdon as non-executive Chairman helped this company through the early stages of dramatic growth of 300% after a successful MBO to provide a broad business perspective to this successful organisation.

ISO-9002 accredited, Apex are equipped with a broad range of systems experience and technical awareness.

Since 1989 they have concentrated expertise on IBM systems. With a range of other high quality business partners they can provide systems that are vendor independent. By analysing client needs they can build solutions that are both manageable and scaleable.

Nick King, MD of Apex, said recently:

“Since the buyout we have experienced phenomenal growth and we are well set as a major player and significant IBM Business Partner”.

Most AS/400 processor requirements are more cost-effectively satisfied by a new machine. However certain situations can still benefit from a second user solution. Apex refurbished equipment is guaranteed for acceptance onto a maintenance agreement. They have the capability to remarket equipment from a world-wide market offering the newest technology and trusty workhorses at a fraction of new costs. Significant saving can be made with these systems when performing processor upgrades, adding memory or disk capacity and providing replacement peripherals.

Apex complement new equipment solutions with the complete spectrum of hardware for rental. This can be a significant resource if you are faced with unplanned transaction surges or unexpected training courses.

When capital budgets are exhausted revenue budgets may still allow you to lease or rent equipment for a critical project!
